

1. Create two tables in SQL: influencers (with influencer_id as PRIMARY KEY and name) and posts (with post_id as PRIMARY KEY, influencer_id as FOREIGN KEY, and caption). Insert at least 3 influencers and 2 posts for each influencer.

Run SQL query/queries on database restaurant: 

```
1 CREATE TABLE influencers (  
2     influencer_id INT PRIMARY KEY,  
3     name VARCHAR(100)  
4 );  
5  
6 CREATE TABLE posts (  
7     post_id INT PRIMARY KEY,  
8     influencer_id INT,  
9     caption VARCHAR(255),  
10    FOREIGN KEY (influencer_id) REFERENCES influencers(influencer_id)  
11 );|
```

✓ MySQL returned an empty result set (i.e. zero rows). (Query took 0.0003 seconds.)

SELECT * FROM `influencers`

influencer_id name

Query results operations

Run SQL query/queries on table restaurant.influencers: ?

```
1 INSERT INTO influencers VALUES
2 (1, 'Aarav Patel'),
3 (2, 'Riya Shah'),
4 (3, 'Neha Mehta'),
5 (4, 'Karan Joshi');
6
7 INSERT INTO posts VALUES
8 (101, 1, 'Traveling to Goa!'),
9 (102, 1, 'My new fitness routine'),
10
11 (103, 2, 'Fashion tips for 2026'),
12 (104, 2, 'Weekend outfit ideas'),
13
14 (105, 3, 'Easy healthy recipes'),
15 (106, 3, 'Morning skincare routine');
```

☐	 Edit	 Copy	 Delete
4	Karan Joshi		

2. Write an SQL query using INNER JOIN to display each post's caption along with the name of the influencer who posted it, based on the tables you created.

Run SQL query/queries on table restaurant.influencers: ?

```
1 SELECT influencers.name, posts.caption
2 FROM influencers
3 INNER JOIN posts
4 ON influencers.influencer_id = posts.influencer_id;
```

Extra options

name	caption
Aarav Patel	Traveling to Goa!
Aarav Patel	My new fitness routine
Riya Shah	Fashion tips for 2026
Riya Shah	Weekend outfit ideas
Neha Mehta	Easy healthy recipes
Neha Mehta	Morning skincare routine

3. Write an SQL query using LEFT JOIN to show all influencers and their posts, including influencers who haven't posted anything yet. If an influencer has no posts, display 'No Posts' in the caption column.
Hint: Use IFNULL or COALESCE to handle NULL values in the result.

Run SQL query/queries on table restaurant.influencers: ?

```
1 SELECT
2     influencers.name,
3     COALESCE(posts.caption, 'No Posts') AS caption
4 FROM influencers
5 LEFT JOIN posts
6 ON influencers.influencer_id = posts.influencer_id;
```

Riya Shah	Fashion tips for 2026
Riya Shah	Weekend outfit ideas
Neha Mehta	Easy healthy recipes
Neha Mehta	Morning skincare routine
Karan Joshi	No Posts

4. Write an SQL query using RIGHT JOIN to list all posts and the corresponding influencer's name, ensuring that even posts without a matching influencer_id (if any) are shown

Run SQL query/queries on table restaurant.influencers: ?

```
1 SELECT
2     posts.caption,
3     influencers.name
4 FROM influencers
5 RIGHT JOIN posts
6 ON influencers.influencer_id = posts.influencer_id;
```
