

Module-2 Session-1

1. Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).

A program is a set of instructions written in a programming language that tells a computer or mobile device what tasks to perform. Programs help users complete different activities such as sending messages, making payments, watching videos, or ordering food. Every application we use daily works because of programs running in the background.

Example:

The Paytm app contains programs that allow users to transfer money, pay bills, recharge mobile phones, and check transaction history. When a user sends money, the program processes the request and completes the transaction securely.

2. List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both

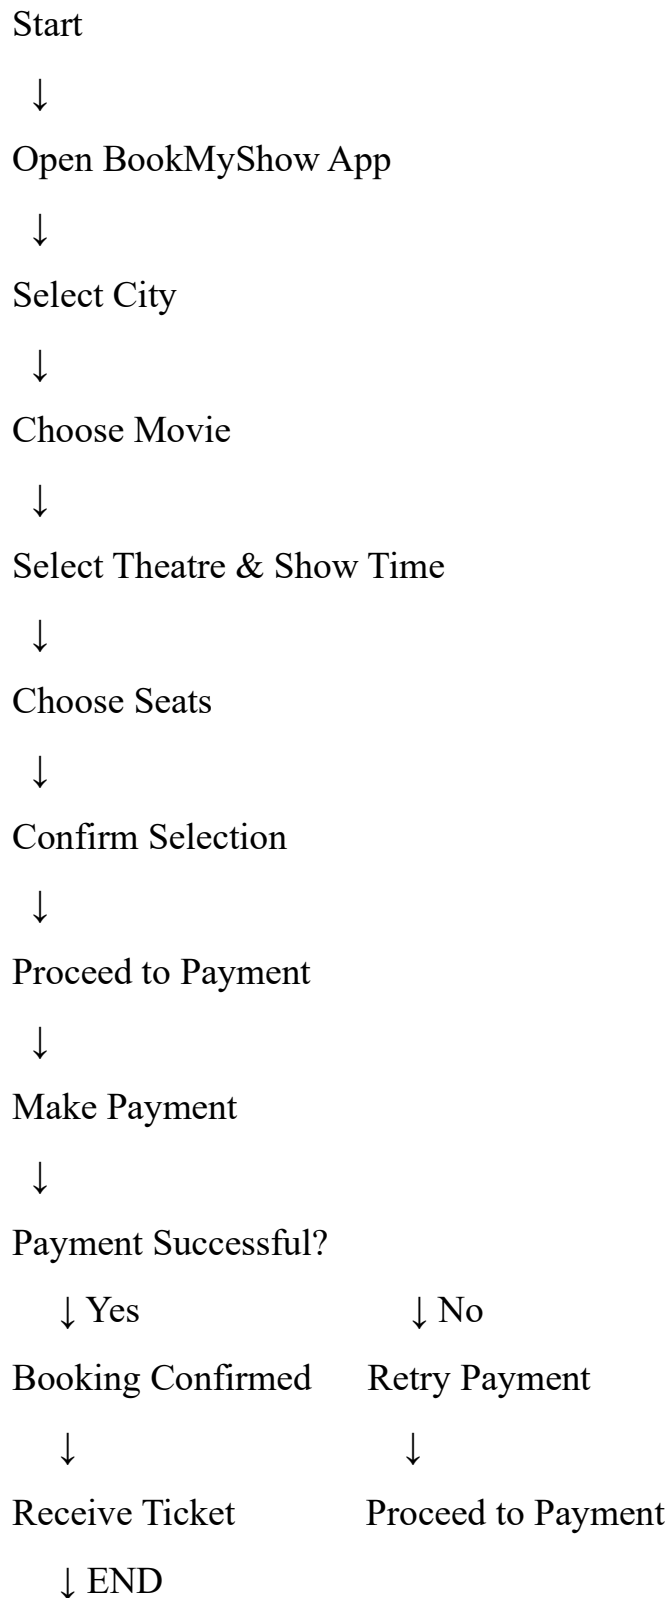

Programming Language	Type
Java	Both Compiled and Interpreted
Python	Interpreted
JavaScript	Interpreted (Modern engines also use Just-In-Time compilation)

Explanation:

- **Java:** Java code is first compiled into bytecode and then interpreted/executed by the JVM (Java Virtual Machine).
- **Python:** Python code is generally executed by an interpreter line by line.
- **JavaScript:** JavaScript is executed by web browsers using JavaScript engines, which traditionally interpret the code but now often use JIT compilation for better performance.

Module-2 Session-1

3. Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

4. Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

Algorithm: Order Food on Swiggy

1. Start.
2. Open the Swiggy application.
3. Log in to your account if required.
4. Enter or confirm your delivery location.
5. Search for a restaurant or food item.
6. Select the desired restaurant.
7. Browse the menu items.
8. Choose the food items you want to order.
9. Add the selected items to the cart.
10. Review the cart and verify the order details.
11. Click on the **Proceed to Checkout** option.
12. Confirm the delivery address.
13. Select a payment method (UPI, Card, Net Banking, Wallet, or Cash on Delivery).
14. Complete the payment process.
15. Receive order confirmation from Swiggy.
16. Track the order until delivery.
17. End
