

Module - 1

1. Write the Git command for each: initialize a repo, stage all files, commit with a message, push to remote, pull latest changes.

Task	Command
Initialize a repository	git init
Stage all files	git add .
Commit with a message	git commit -m "Initial commit"
Push to remote repository	git push origin main
Pull latest changes	git pull origin main

2. What is the difference between git fetch and git pull? Answer in 2 lines.
 - **git fetch** downloads the latest changes from the remote repository but does not merge them into your local branch.
 - **git pull** downloads the latest changes and automatically merges them into your current local branch

3. Create a new GitHub repository, push any small text file from your local system, and share the repo link.

https://github.com/mahekbosamiya-pixel/26May_Mahek_PythonBackend/blob/a7efe7e999ed548da9091f6ac5a780d4a9aa62c5/26May_Mahek%20Bosamiya_Python%20Backend/c/demo.cpp

4. What is the difference between a Fork and a Pull Request? Answer in 2 lines.

Module - 1

- A **Fork** creates your own copy of another person's repository in your GitHub account.
- A **Pull Request (PR)** is a request to merge your changes from a branch or fork into another repository.

5. Create a new branch named feature-test, make one commit on it, and merge it back to the main branch. Write the commands you used.

Step 1: Create and Switch to Branch

```
git checkout -b feature-test
```

Step 2: Make Changes

```
echo "New feature added" >> sample.txt
```

Step 3: Stage and Commit

```
git add .  
git commit -m "Added feature test changes"
```

Step 4: Switch Back to Main

```
git checkout main
```

Step 5: Merge the Branch

```
git merge feature-test
```

Step 6: (Optional) Delete the Branch

```
git branch -d feature-test
```

Complete Command Sequence

```
git checkout -b feature-test  
echo "New feature added" >> sample.txt  
git add .  
git commit -m "Added feature test changes"  
git checkout main  
git merge feature-test  
git branch -d feature-test
```

Module - 1

This creates the **feature-test** branch, makes a commit on it, merges it into **main**, and then removes the temporary branch.
